

AFIX TRACKER

# MAXAR

## AFIX TRACKER

### Automated Fingerprint and Palmprint Identification

AFIX Tracker was the first automated fingerprint and palm print identification system to run on affordable PCs using familiar Windows software -- and provide the same advanced capabilities as far more expensive systems, including "lights out" searching of remote AFIS systems and fully-scalable search performance. Tracker is compatible with most major live scan devices and can share files with other NIST-compliant systems. Your investigators' time should be spent solving cases, not learning complicated software, waiting for results or poring over candidate prints that aren't even close.

### Affordable, Upgradeable, and Standards-based

- Easily upgrade Tracker for increased database capacity and search performance.
- Fully NIST/EFTS-compliant.
- Easy to install and maintain. Runs in Windows OS on a standard PC.
- Unlimited toll-free technical support and all software updates are included in the support package.
- Add multiple workstations economically with Tracker LE (entry workstation), Tracker LW (latent workstation) and Tracker RW (remote workstation) compatible systems.
- Automatically conduct reverse searches of all new record prints against unsolved latents.
- Enter fingerprints, palm prints, and latents via flatbed scanner, digital camera, or live-scan devices.
- Automatic scaling of photographed latents. Scaling tool automatically compensates for unknown scale when scanning photographed latents or importing images directly from a digital camera.
- AFIX Smart Extract® automatically plots minutiae from rolled prints, plain impressions, and palm prints.
- Search every possible combination of ten-prints, palm prints, and latents with full 360° rotation when necessary or restrict rotation when orientation can be determined.
- Print reports of search results and final side-by-side comparisons.

### DESIGNED FROM THE GROUND UP BY AND FOR LATENT PRINT EXAMINERS

The Stereo Comparison screen which displays search results in AFIX Tracker, Tracker LW and Tracker RW provides a dynamic environment for the examiner's analysis and evaluation of candidates. Features include the visual linking of matching features, both as a complete pattern set and individually, the ability to view both record and latent search results in a single screen, the ability to edit minutiae patterns and get immediate dynamic updating of search results without resubmission of the search and a WYSIWYG stereo print capability.

#### Hardware

AFIX Tracker systems include the following or equivalent hardware:

- Dell Precision Workstation (with keyboard and mouse)
- LCD Monitor
- FBI-approved Flatbed Scanner
- External USB Backup Hard Drive
- APC Battery Backup (UPS)
